In this advanced level, we will expand on the topics previously discussed in the Resource Guide for Support Professionals (Book 1) and build on that knowledge base to introduce new topics specific to high level support staff such as company safety managers, compliance directors, tow operator company owners, etc. Additionally, this guide may be used as a guide to prepare for the TRSCP(R) Advanced Level certification exam available on [www.towcert.com](http://www.towcert.com). Background For towing and recovery professionals to effectively do their jobs, they rely on other industry professionals serving in supportive roles who are not themselves tow operators. While many don't work directly on the roadways, support personnel such as dispatchers, scene safety supervisors, compliance

directors, and office managers are an integral part of the towing and recovery team. The role of support personnel is critical to effective incident management. Many of these individuals respond to incident sites or work behind the scenes to dispatch equipment and resources that are necessary to facilitate the clearance. They also handle communication, documentation, and track the incident for safety compliance thereby contributing to overall clearance needs. While the TRSCP(R) was developed specifically for the towing and recovery industry, the program is open to all qualified candidates in other associated fields that meet the requirements. If you are an agency dispatcher in law enforcement, 911, TIM, Department of Transportation (DOT), etc. we hope this program will enhance your understanding of the equipment, resources, and logistics necessary for efficient towing and recovery response and, thereby, increase interdisciplinary communication. If you are a non-agency party that may be present at an incident scene (such as Public Information Officers (PIO), media, fleet safety directors, and insurance adjusters), we hope this will expand your knowledge base of incident management and quick clearance. This is an extract from the main text) This book on aerotowing gliders written because there is little reference material published about the worldwide. So because of the lack of published information, I thought it important to gather the wealth of knowledge that is out there on the collate it and present it to our community in the interests of safety and efficiency. The book is intended as a comprehensive guide to glider towing operations, with that all important emphasis on safety. The intent is to provide all the relevant information in one straightforward, easy to read book. The notes are intended to be very generic and non-country specific. Even though local procedures differ, hopefully the information should be useful to any glider tug pilot, anywhere in the world. Each gliding organisation has its operating environment and problems, therefore should adapt, further or improve these suggestions to suit their own needs. It is fundamental that every tug pilot be a person who is both trustworthy and highly reliable as it is a flying task with huge responsibility placed on the pilot. Aerotowing is expensive, can be noisy and has its own special hazards. These factors have a bearing on the very existence of gliding and it is therefore essential that glider aerotowing be carried out safely, efficiently and thoughtfully, paying particular regard to our neighbours. Your particular aerotowing should of course be carried out in accordance with national laws, regulations, procedures and in conjunction with your organisations flying rules. As the pilots in command of an aircraft you are ultimately responsible for the safe conduct of the flight and the actions you choose to take. The glider pilots requirements should of course be accommodated as far as possible. Glider aerotowing should be good for general flying skills. As a flying and gliding instructor for over twenty years, I have noticed that most glider tug pilots are often also glider pilots and have above average handling and situational awareness skills. Flying tugs should of course also be quite good fun! It is hoped that this comprehensive book will meet the ground school requirements of any current or future glider towing ratings.
