Drawing on decades research and incorporating interviews from some of the top leaders of our time, Hamilton examines the factors that impact curiosity including fear, assumptions, technology, and environment (FATE). Teaching and Learning Chinese in Higher Education deals with the current issues and challenges faced by teachers and learners of Chinese. Written by leading professionals and academics, the book is the first collection of research articles based on data collected in higher education institutions in the UK. The studies focus on

concerns related to learners of Chinese as a foreign language (CFL) and aim to establish studies on teaching Chinese as a foreign language (TCFL) as part of the mainstream of applied linguistics The contributors have applied their theoretical backgrounds in applied linguistics and education to tackle issues such as how to benchmark the Chinese written language with CEFR, how to integrate standardised Chinese proficiency tests with institutional assessments and teaching methodologies. Teaching and Learning Chinese in Higher Education will be invaluable to professionals, academics and students

seeking theoretical frameworks in applied linguistics for TCFL. This book is about the ways in which experiments can be employed in the context of research on learning technologies and child-computer interaction (CCI). It is directed at researchers, supporting them to employ experimental studies while increasing their quality and rigor. The book provides a complete and comprehensive description on how to design, implement, and report experiments, with a focus on and examples from CCI and learning technology research. The topics covered include an introduction to CCI and learning technologies as

interdisciplinary fields of research, how to design educational interfaces and visualizations that support experimental studies, the advantages and disadvantages of a variety of experiments, methodological decisions in designing and conducting experiments (e.g. devising hypotheses and selecting measures), and the reporting of results. As well, a brief introduction on how contemporary advances in data science, artificial intelligence, and sensor data have impacted learning technology and CCI research is presented. The book details three important issues that a learning technology and CCI researcher

needs to be aware of: the importance of the context, ethical considerations, and working with children. The motivation behind and emphasis of this book is helping prospective CCI and learning technology researchers (a) to evaluate the circumstances that favor (or do not favor) the use of experiments, (b) to make the necessary methodological decisions about the type and features of the experiment, (c) to design the necessary "artifacts" (e.g., prototype systems, interfaces, materials, and procedures), (d) to operationalize and conduct experimental procedures to minimize potential bias, and (e)

to report the results of their studies for successful dissemination in top-tier venues (such as journals and conferences). This book is an open access publication. Lone Survivor meets Marley & Me in this “inspiring and very moving” (Bear Grylls, host of the hit TV show Man vs. Wild) memoir of an extraordinary service dog whose enduring love brought a wounded soldier back to life. A decade ago, special forces warrior Jason Morgan parachuted into the Central American jungle on an antinarcotics raid. He’d served with the famous Night Stalkers on countless such missions. This one was different. Months later, he regained

consciousness in a U.S. military hospital with no memory of how he’d gotten there. The first words he heard were from his surgeon telling him he would never walk again. The determined soldier responded, “Sir, yes, I will.” After multiple surgeries, unbearable chronic pain, and numerous setbacks, Morgan was finally making progress when his wife left him and their three young sons. He was a single father confined to a wheelchair and tortured by his pain. At this very dark, very low point, Morgan found light: Napal, the black Labrador who would change his life forever. A Dog Called Hope is the incredible story of a service dog who brought a devastated

warrior back from the brink and taught him how to be a true father. It is the story of Napal, who built bridges between his wheelchair-bound battle buddy and the rest of able-bodied humankind. It is the story of Jason, who found life’s true meaning with the help of his faithful companion. Humorous, intensely moving, and uplifting, Jason and Napal’s heartwarming tale will brighten any day and lift every heart. Winner, 2016 Best Authored Book presented by the Society for Research on Adolescence This is what democracy looks like: Youth organizers in Colorado negotiate new school discipline policies to end the school to jail track. Latino and African American students march to district headquarters to protest high school closure. Young immigration rights activists persuade state legislators to pass a bill to make in-state tuition available to undocumented state residents. Students in an ESL class collect survey data revealing the prevalence of racism and xenophobia. These examples,

based on ten years of research by youth development scholar Ben Kirshner, show young people building political power during an era of racial inequality, diminished educational opportunity, and an atrophied public square. The book's case studies analyze what these experiences mean for young people and why they are good for democracy. What is youth activism and how does it contribute to youth development? How might collective movements of young people expand educational opportunity and participatory democracy? The interdependent relationship between youths' political engagement, their personal

development, and democratic renewal is the central focus of this book. Kirshner argues that youth and societal institutions are strengthened when young people, particularly those most disadvantaged by educational inequity, turn their critical gaze to education systems and participate in efforts to improve them.
