Is campaign finance reform dead or alive? Can Congress really fix the problems that American voters perceive in their electoral system? This book assumes that voters are the end users of campaign finance reform, and it questions whether average citizens really know what they are asking for or what they may get when they demand change. In this book, ten prominent political scientists and commentators challenge the conventional wisdom about the role of money in campaigns and elections. They look at the level of campaign spending in recent times, the judicial perspective on spending as a First Amendment right, the current diversity of donors, the media spin on the subject, and the act of contributing as a form of political participation. The inimitable Norm Ornstein wraps it all up with a model reform proposal that is at once more moderate than McCain-Feingold and yet radical in its own way. Published under the auspices of Berkeley Public Policy Press." In 2016, Americans fed up with the political process vented that frustration with their votes. Republicans nominated for president a wealthy businessman and former reality show host best known on the campaign trail for his sharp rhetoric against immigration and foreign trade. Democrats nearly selected a self-described socialist who ran on a populist platform against the influence of big money in politics. While it is not surprising that Americans would channel their frustrations into votes for contenders who pledge to end business as usual, the truth is that we don't have to pin our hopes for greater participation on any one candidate. All of us have a say—if we learn, master and practice the skills of effective citizenship. One of the biggest roadblocks to participation in democracy is the perception that privileged citizens and special interests command the levers of power and that everyday Americans can't fight City Hall. That perception is undoubtedly why a 2015 Pew Charitable Trusts survey found that 74 percent of those Americans surveyed believed that most elected officials didn't care what people like them thought. Graham and Hand intend to change that conventional wisdom by showing citizens how to flex their citizenship muscles. They describe effective citizenship skills and provide tips from civic experts. Even more importantly, they offer numerous examples of everyday Americans who have used their skills to make democracy respond. The reader will see themselves in these examples of citizens who chose to be victorious participants rather than tranquil spectators in the arena of democracy. By the end of the book, you will have new confidence that citizen participation is the lifeblood of America -- and will be ready to make governments work for you, not the other way around. Chief David Couper first wrote this book a number of years ago when he was chief of the Madison Police Department. Over the years, "How To Rate Your Local Police" became a trusted user's guide for civic, governmental, and police leaders. He now has revised this book and updated it for today's challenging police environment in which many citizens are questioning whether or not they can trust their police. It answers your most important questions regarding police: "Is my police agency effective in fulfilling its responsibilities to me and my community and can they be trusted?" It also contains an enlarged appendix and an easy-to-use rating sheet. Since his retirement, Chief Couper has continued to write and blog on improving our nation's police -- see "Improving Police" on Wordpress.com. "This user's guide and reference document describes the physical features of the Salmon River Basin, Idaho, stream channels that represent "natural conditions" for fish habitat—that is, streams that have not been influenced by major human disturbances. The data base was created to assist biologists and resource managers. It describes resource conditions that can be achieved through management objectives." How we can evade, protest, and sabotage today's pervasive digital surveillance by deploying more data, not less—and why we should. With Obfuscation, Finn Brunton and Helen Nissenbaum mean to start a revolution. They are calling us not to the barricades but to our computers, offering us ways to fight today's pervasive digital surveillance—the collection of our data by governments, corporations, advertisers, and hackers. To the toolkit of privacy protecting techniques and projects, they propose adding obfuscation: the deliberate use of ambiguous, confusing, or misleading information to interfere with surveillance and data collection projects. Brunton and Nissenbaum provide tools and a rationale for evasion, noncompliance, refusal, even sabotage—especially for average users, those of us not in a position to opt out or exert control over data about ourselves. Obfuscation will teach users to push back, software developers to keep their user data safe, and policy makers to gather data without misusing it. Brunton and Nissenbaum present a guide to the forms and formats that obfuscation has taken and explain how to craft its implementation to suit the goal and the adversary. They describe a series of historical and contemporary examples, including radar chaff deployed by World War II pilots, Twitter bots that hobbled the social media strategy of popular protest movements, and software that can camouflage users' search queries and stymie online advertising. They go on to consider obfuscation in more general terms, discussing why obfuscation is necessary, whether it is justified, how it works, and how it can be integrated with other privacy practices and technologies.

This curriculum guide is intended to provide practical, easy-to-use applications for the widest range of faculty who would like to develop their students' citizenship skills by integrating civic responsibility concepts and practices into their college courses. The authors recognize that community college faculty teach courses that reflect varying levels of student development, so they have incorporated ideas that can be applied to a large number of courses, from developmental to honors. Similarly, because some faculty may have more flexibility than others in course content or structure, they present activities that can work at several levels of involvement. The authors have also taken into account the various disciplines and certificate and degree programs offered at community colleges, so that faculty members from liberal arts, social sciences, physical sciences, mathematics, and vocational and technical programs all may find this guide useful and appropriate for their classes. This guide contains 5 chapters. Chapter 1 looks at the need for service learning and civic responsibility in the curriculum, as a response to larger changes and trends in society and the mission of higher education. In this chapter the authors also ask teachers to consider their own classroom practices as related to civic responsibility. Chapter 2 examines the meaning and implications of civic responsibility--how it can be defined, how teaching civic skills is highly compatible with the larger mission of higher education, and how civic responsibility is related to service. Chapter 3 focuses on the practice of civic responsibility. Here they explore strategies that classroom teachers can use to integrate civic responsibility concepts and activities into their courses so that students come away with a greater understanding of what is expected of them as citizens in their society. These strategies, all of which can be used with service learning, range from one-time experiences or activities to multi-class or semester-long involvement. Chapter 4 addresses assessment. Although it may prove difficult to assess the level of civic responsibility acquired by students because the goals of a civic curriculum are not as easily quantifiable as many other learning objectives, several strategies are offered that have been used successfully in community colleges. Chapter 5 poses closing questions about the mission of teachers' courses and their college and the challenges they may face as they integrate civic responsibility into their curriculum. Six appendices are included: (1) Films, Quotations, and Articles; (2) Reflection Resources; (3) Reflection Exercises; (4) Bibliography; (5) Organizations and Web Sites; and (6) Supplemental Materials. (Contains 3 tables.) [This document is based upon work supported by the Corporation for National and Community Service. A guide for constructing and using composite indicators for policy makers, academics, the media and other interested parties. In particular, this handbook is concerned with indicators which compare and rank country performance. This guide provides users of the National Household Education Survey (NHES) data with suggested techniques for working with the data files. Special attention is paid to topics that will help users avoid the most commonly made mistakes in working with NHES data. The guide is meant to be an introduction and an overview, and not a substitute for the separate user's manuals and other reports. The NHES is a data collection system of the National Center for Education Statistics that provides descriptive data on the educational activities of the U.S. population and offers policymakers, researchers, and educators a variety of statistics on the condition of education in the United States. The primary purpose of the NHES is to collect repeated measurements of the same phenomena at different points in time, but one-time surveys of topics of interest may be fielded. The NHES is a telephone survey of the noninstitutionalized civilian population of the United States, and households are selected using random digit dialing methods. The NHES has been conducted in 1991, 1993, 1995, and 1996. This guide contains the following sections: (1) introduction and overview; (2) brief descriptions of the separate NHES data files; (3) comparisons with other data sets; (4) familiarization with the data and descriptions of data collection and processing; (5) selecting variables for working data sets; (6) NHES design; (7) working with missing data; and (8) weights and estimation procedures. Appendixes contain commonly asked questions and answers, examples that illustrate points in the text, and a summary of weighting and sample variance estimation variables. (Contains 10 references.) (SLD) The National Household Education Survey (NHES) is a random digit dial telephone survey of households developed by the National Center for Education Statistics. It has been conducted in 1991, 1993, 1995, and 1996, with varying components each year. The NHES 91/93/95/96 CD-ROM contains an electronic codebook (ECB) program that, after being installed on a personal computer, allows the user to examine the variables in each of the NHES data sets as well as create Statistical Analysis System (SAS) or Statistical Package for the Social Sciences (SPSS) programs to generate an extract data file for any of the NHES data files on the CD-ROM. The files include the 1991 and 1995 Adult Education files, the primary and preprimary education files from 1991, the school readiness and school safety files from 1993, the 1995 early childhood program participation file, and the 1996 household and library, parent and family involvement in education and civic involvement, youth civic involvement, and adult civic involvement files. The ECB is a DOS-based program for IBM-compatible personal computers. Sections describe its contents and use, focusing on what can be done with the ECB and how to do it. Emphasis is on extracting information from the files. Eight appendixes provide specific use information and samples, including SAS and SPSS samples. Or would you get them on the court and have them play? In basketball, the answer is easy&BAD:—you do both. So why teach politics only as a spectator sport? Senator Bob Graham believes that students should expand on their classroom learning about the political system: he spurs them to hit the court and actually play the game. If students work on an issue they care about, politics will become a meaningful and positive experience. This short, how-to guide takes students out of theoretical discussions of policy and into a world where they can affect change. Graham&BAD:'s goal is to have students identify a problem, and then walk them through each step from researching the issue, to getting others involved, to engaging the media. Each chapter starts with a real case, showing citizens tackling a step in the process, and ends with a summary checklist and a series of questions that help students put Graham&BAD:'s game plan in action. By offering students concrete guidance, an array of resources, and advice for troubleshooting and overcoming barriers, this compact user&BAD:'s guide gets students way beyond textbook learning. Thirty-five years ago, as a member of the Florida Legislature, Bob Graham took on the challenge of civic education for eighteen weeks at a Miami-area high school. His time as both a governor and a senator has only strengthened his resolve to pique students&BAD:' curiosity about politics and teach them to get what they want from government. This open access book presents an in-depth analysis of data from ICCS. An international group of scholars critically

address the state of civic and citizenship education in the four Nordic countries that participated in the IEA International Civic and Citizenship Education Study (ICCS) in 2009 and 2016. The findings are of particular relevance to educators at all levels, from school education through to teacher education. Nordic countries have long traditions of democracy and their students have performed relatively well in the ICCS assessments. Nonetheless, citizenship education continues to evolve and has received increasing attention in recent educational reforms, indicating policymakers understanding that schools play an important role in establishing democratic values among future citizens. Data from ICCS can be used to analyze, discuss, and reflect on the status of civic and citizenship education and can contribute to the discourse on the potential role of education in contributing to sustainable democracies for a common future. However, teaching citizenship and learning democracy are two different things. While young people can be taught about democracy in school, it is vital that schools work together with the wider community in which youth operate to strengthen civic understanding and values for all young people regardless of their social and economic background.

Contrasting over 5000 words (such as habitable and inhabitable, precipitation and rainfall, reigns and reins), Words: a User's Guide provides examples of usage adapted from large national databases of contemporary English, and illustrates each headword in typical contexts and phrases. This book gives you straightforward answers, and helps with pronunciation, spelling, style and levels of formality. For those working internationally it presents international standards and compares usage in Britain and the USA.
