Ensuring long-term care (LTC) is one of the most urgent problems in health care today. Demographic trends are expected to lead to a higher proportion of old and very old people in the global population. As a result, an increased proportion of global income will be devoted to LTC services. With this in mind, Long-term Care: Economic Issues and Policy Solutions aims to address the following important objectives: to provide a detailed analysis of the arrangements and institutions designed to protect the disabled and dependent elderly people in various countries, and to try to evaluate their respective merits. to discuss the projections of future costs of protection for dependent elderly, and to assess the impact of improvements in disability-free life expectancy on the future cost of care and choices between informal and formal care. to present empirical research on these decisions, with special consideration of primary caregivers, and on the substitution between in kind and cash benefits as well as between institutional (or formal) care and home (or informal) care. to analyze different theoretical approaches in modeling decisions referring to LTC services to be provided both within and between generations. With its mix of empirical, theoretical and policy-related contributions, Long-term Care: Economic Issues and Policy Solutions will be of interest not only to health economists, but also to social scientists, health insurers, and public policy advocates. CE credit available through the No Dakota Nurses Association "Smoothly written and effectively blending hard facts and personal observations, the book is peppered with inspiring success stories about "what works" in terms of improving morale and the quality of nursing practice." Sean Clarke, RN, PhD, CRNP University of Pennsylvania School of Nursing "[Fabre's] not afraid to tackle the tough issues .Implementing Smart Nursing concepts will result in energy enhancing experiences for your nurses and better care for your patients." --Susan Keane Baker, MHA Author, Managing Patient Expectations Too many health care organizations are using short-term fixes to patient health care delivery problems. Patients, however, require long-term solutions that treat the whole person, not just their particular ailment. What the profession needs is Smart Nursing. Smart Nursing provides practical guidance on patient care that

every nurse, manager, and health care facility can use to restore patient safety, generate revenue, reduce nurse turnover, and stimulate realistic health care solutions. In this new edition, Fabre presents the recently updated Smart Nursing model. This practical model uses seven basic elements to deliver improved results, improved patient care, and increased employee job satisfaction. These simple yet critical building blocks- caring, respect, simplicity, flexibility, integrity, communication, and professional culture-allow nurses to create a positive work environment, and provide holistic care to patients. Special Features: Provides practical, cost-effective solutions to business and management problems, such as strategies for improved staffing and retention Includes guidance on leadership and mentoring, building high-performance teams, and accelerating professional development Presents strategies and recommendations for developing strong relationships with staff for increased communication and efficiency It's official: there's a crisis in home health care. The crisis? There aren't enough caregivers This is already a recognized industry problem, but it's likely only to get worse. This is a point in history, after all, when about 10,000 Baby Boomers turn 65 every day--and more of them are needing health care. What do we do? Stephen Tweed is a foremost expert on the home health industry's caregiver recruiting and retention crisis. He shares his insight and solutions in *Conquering the Crisis*--so that anyone reading it may find themselves doing just that. *America's Health Care Crisis Solved* highlights the major pitfalls of our current health care system and shows why, without changes, health care costs will soon demolish the American economy as well as the opportunity to receive quality care. However, contrary to the increasingly popular idea of a government health plan, the alternative presented by authors J. Patrick Rooney and Dan Perrin brings the self-interest of you, the American consumer, into the equation. Author Michael Dumbrell has helped hundreds of families find personalized home care solutions through Senior Helpers - Central West Florida. In this book, he broadens the topic to include insights about aging and the human connection, broaching the subject of home care with seniors, the cost of care, government and insurance funding, and the unique challenges of caring for loved ones who have diseases such as Alzheimer's disease and other dementias. If you want to ask the right questions and make informed decisions about senior home care, this book is for you. Michael Dumbrell Senior Care Advisor Senior Helpers Pasco and Pinellas Counties, Florida Help stop the widespread problem of medication errors among the elderly The problem of medication errors among the elderly is widespread. *Improving Medication Management in Home Care: Issues and Solutions* tackles this tough issue by closely examining the challenges faced in preventing medication errors in home and community care program settings and putting forth effective solutions to better manage medication use. Respected experts discuss the unique role of the pharmacist in improving patient safety, presenting a comprehensive collection of evidence-based studies featuring national and international viewpoints, cutting-edge interventions, and cost-effective procedures that address medication problems in older adults. Polypharmacy is the term used for patients receiving too many medications for a specific treatment. The implications for drug-drug interactions can be dangerous for the unaware patient. *Improving Medication Management in Home Care: Issues and Solutions* focuses on several different effective management programs and examines each in detail, completely explaining the positive—and negative—results. This hands-on practical information is useful for all professionals and field providers working with older adults and their medication concerns. The book also provides valuable lessons through the experiences of national home health leaders in various settings—hospital-based, rural, large or small, etc., as well as community-based programs for dually eligible older adults. The book is extensively referenced and includes an abundance of clear, helpful tables, figures, and Web resources. *Improving Medication Management in Home Care: Issues and Solutions* explores: developing computerized risk assessment screenings implementing pharmacist-centered interventions improving transitional care from hospital to home the Prescription Intervention and Lifelong Learning (PILL) program Medication Therapy Management Services a quality-improvement project to reduce falls and improve medication management outcome-based quality improvement for patient safety intern programs that can provide cost-effective consultant services

Improving Medication Management in Home Care: Issues and Solutions is essential reading for home health care administrators, clinicians, managers, pharmacists, physicians, educators, students, those professionals involved in the field of aging, and health practitioners world-wide. We are living in a world full of innovations for the elderly and people with special needs to use smart assistive technologies and smart homes to more easily perform activities of daily living, continue social participation, engage in entertainment and leisure activities, and to enjoy living independently. These innovations are inspired by new technologies leveraging all aspects of ambient and pervasive intelligence with related theories, technologies, methods, applications, and services on ubiquitous, pervasive, AmI, universal, mobile, embedded, wearable, augmented, invisible, hidden, context-aware, calm, amorphous, sentient, proactive, post PC, everyday, autonomic computing from engineering, business and organizational perspectives. In the field of smart homes and health telemedicine, significant research is underway to enable ageing and disabled people to use smart assistive technologies and smart homes to foster independent living and to offer them an enhanced quality of life. A smart home is a vision of the future where computers and computing services will be available naturally and unobtrusively anywhere, anytime, and by different means in our daily living, working, learning, business, and information environments. Such a vision opens tremendous opportunities for numerous novel services/applications that are more immersive, more intelligent, and more interactive in both real and cyber spaces. The senior population is multiplying by the millions! In fact, during the next 25 years, the senior population in America is expected to double — growing faster than the total population in every state. This means one thing: a tremendous opportunity for aspiring and compassionate entrepreneurs. From providing adult daycare or homecare to transportation or concierge needs, this guide covers today's most requested services within the 65-and-older market. Readers learn, step by step, how to choose the right opportunity for them, legally and financially establish their business, acquire licenses and certifications, set policies and procedures, and much more! Priceless insight, advice, and tips from practicing senior care professionals help aspiring entrepreneurs to discover their specialty from within one of six growing areas of interest — adult daycare, relocation services, homecare, transportation services, concierge, and travel service; design a business to suit customers' demographics and special needs; set rates; create a support staff who will facilitate success; use effective marketing and advertising to get the word out; build valuable business partnerships that lead to referrals; and plan for future growth. A record number of seniors are seeking help, and this guide is the key to starting a senior care service today! In the past ten years, the health industry has witnessed an explosion in the growth of home care services. In this timely book, the author shows health professionals how to increase access to home health care while simultaneously controlling costs and maintaining quality. He reveals why home care has become the preferred form of treatment for many patients and caregivers and analyzes the specific patient populations for which it is most appropriate. Approx. In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome. This book is about caring for elderly persons in the 21st century. It shows that care has

many facets and is influenced by many factors. Central topics of this book thus include the relation between the person depending on care and the care giver(s), the impacts of caregiving on the family and the larger social context, as well as socio-cultural and political aspects underlying the growing need for and the practice of formal and informal care. It is evident that care as a real-life phenomenon of our time needs the co-operation of multiple disciplines to better understand, describe, explain and modify phenomena of elder care. Such a need for cross-disciplinary research is even more urgent given the increasing population aging and the impending gaps between demand and supply of care. The present book is dedicated to this approach and provides a first substantive integration of knowledge from geropsychology, other gerosciences, and cultural psychologies by a multi-disciplinary cast of internationally renowned authors. Cultural psychology emerged as a valuable partner of the gerosciences by contributing essentially to a deeper understanding of the relevant issues. Reading of this book provides the reader—researcher or practitioner—with new insights of where the problems of advancing age take our caring tasks in our 21st century societies and it opens many new directions for further work in the field. Finally and above all, this book is also a strong plea for solidarity between generations in family and society in a rapidly changing globalized world.

Drug Free Home Care Solutions for Developmental Delays Dr. Mark Darner BS, BS, DACNB, FASA, is the developer of the Multi-Modal Therapy System(R). He holds degrees in Biochemistry, Human Anatomy & Physiology, Fellowship with the Acupuncture Society of America, and Doctorate degree in Chiropractic. He has advanced clinical neuroscience Diplomate board certification through the American Chiropractic Neurology Board. He has completed the Clinical Neuroscience program through the prestigious Carrick Institute for Graduate Studies and is a charter member of the International Association of Functional Neurology and Rehabilitation. He has over the last twenty years observed that what is wanted and needed by patients is a simpler way to understand and talk about their conditions. After reading numerous neurology texts, some advanced clinical in nature and some for the lay person, he observed that the majority of these texts continue to present neurology in such a complicated fashion that it does not yield understanding and only furthers the frustration of patients who seek to understand their conditions or the conditions of their family members. Presented here is a simplified, hopefully understandable, version of neurology for the patient to understand their conditions, to sensibly talk to their doctors, and to have a simplified at home therapy option for developmental delay. Apologies to the neurologists and functional neurologists reading this text for some generalizations and assumptions will be made for simplicity and understanding that don't precisely correspond to the factual neurology of the topic. The importance of having understanding of condition outweighs some liberties he takes in describing the neurology and how it functions. He appreciates those of you were working in the field of functional neurology and gives thanks and recognition to mentors and colleagues. Thank you for your interest in learning more about developmental delay concepts. The concepts here are very rapidly changing in scope and nature. I He has endeavored to present a simplified way of thinking and understanding one's condition so that you may talk to your doctor and have a do it yourself option for home therapy for yourself or loved one. The hope for this book is it will significantly reduce the amount of confusion you have concerning your condition. Many of the neurologically complex circuitry and pathways have been removed from the discussion. An attempt to explain conditions and how the nervous system physiology works in away that is understandable for most patients. He will eliminate for the most part developmental embryological and unnecessarily complicated electrical schematics for the purposes of understanding as you go through the material. He will identify more generally the nature of the condition and encourage you not to become frustrated, but to understand that the nervous system in its grand complexities can also be understood in a simplicity. Effective functional neurological treatment protocols can be highly successful. Current medical neurological approaches of drug interventions and symptomatic relief are not the only options in development delay treatment. He will tell you factually that there exists an innate intelligence in the body to alter both its function and structure. It just needs a bit of targeted stimulation to resume normal function. The

companion therapy manual for this book is also available on Amazon.com and contains all the evaluation and therapy protocols for developmental delay conditions described in this book. You will after reading this book have a good grasp of developmental delay conditions, the primitive reflexes which need therapy, the hemisphere of the brain in delay in you or your loved one and the basic outline of my multi modal therapy system. So let's begin the description of developmental delay and what can be done about it. "May you never be the same again!" Dr. Mark Darner Bridging the Family Care Gap explores expected future shortages of family caregivers of older persons and identifies potential solutions. The book examines the sustainability and availability of care management models and whether they can be effectively scaled up to meet community needs. It identifies newly emerging policy initiatives at local, state, and federal levels. The book addresses the state of family caregiving science, dissemination and implementation of promising programs and supports, technological innovations, and other strategies to offset the family care gap. This edited volume also explores lay healthcare workers as guides, interpreters, and advocates in healthcare systems that provide continuity of contact for family caregivers. Details threats to family caregiving-sociodemographic, chronic disease, and socioeconomic challenges Presents solutions to the caregiving gap in a systematic, synthesized manner Addresses the intersection of family caregiving and technology Discusses chronic disease management to offset and reduce the need for family caregiving Describes models of caregiver support in work settings Reimagines the delivery of long-term services and supports with novel initiatives This is a compilation of tried and tested remedies that the reader can administer at home themselves. Every remedy is doctor-approved. The book suggests over-the-counter remedies for more than 140 common health problems. • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world. A groundbreaking prescription for health care reform—from a legendary leader in innovation . . . Our health care system is in critical condition. Each year, fewer Americans can afford it, fewer businesses can provide it, and fewer government programs can promise it for future generations. We need a cure, and we need it now. Harvard Business School’s Clayton M. Christensen—whose bestselling *The Innovator’s Dilemma* revolutionized the business world—presents *The Innovator’s Prescription*, a comprehensive analysis of the strategies that will improve health care and make it affordable. Christensen applies the principles of

disruptive innovation to the broken health care system with two pioneers in the field—Dr. Jerome Grossman and Dr. Jason Hwang. Together, they examine a range of symptoms and offer proven solutions. **YOU'LL DISCOVER HOW** “Precision medicine” reduces costs and makes good on the promise of personalized care Disruptive business models improve quality, accessibility, and affordability by changing the way hospitals and doctors work Patient networks enable better treatment of chronic diseases Employers can change the roles they play in health care to compete effectively in the era of globalization Insurance and regulatory reforms stimulate disruption in health care Home therapy manual for Autism, ADHD, OCD, Asperger's, Tourette's and developmental delays. Initial patient assessment in home health can be tricky. If documentation does not adequately provide a reason for skilled nursing care in the home, you might not get reimbursed at all. In **Documenting Medical Necessity: A Practical Guide for Home Health**, author Heather Calhoun, RN, BSN, HCS-D, COS-C, provides down-to-earth, conversational documentation tips with dozens of example scenarios to help nurses understand medical necessity and document in a manner that encourages proper and complete reimbursement. In addition to initial assessments for skilled services, continued skilled care must also be properly documented. This resource will help nurses provide skilled services based on critical thinking throughout the continuum of care. This book has: A grounded, conversational style that speaks directly to nurses who are responsible for the documentation Dozens of hypothetical examples that provide concrete learning opportunities Scenarios that are available electronically to provide handouts for ongoing and on-the-go learning Content that serves as a great resource for orientation and annual training The fourth volume in the prestigious **Advances in Long-Term Care Series** continues to address the challenges of long-term care with innovation and practical insight. Highlighting the dynamic nature of long-term care, the authors share their practical insight and explore issues linked to the cost and process of delivering care to an increasing number of clients. Topics include transitions between acute and long-term care, geriatric day hospitals, subacute care, and more. Contributors from a range of gerontologic disciplines use new research as bases to develop care solutions under the mandates of managed care. Patient-focused healthcare, driven by COVID-19 experiences, has become a hallmark for providing healthcare services to patients across all modalities of care and in the home. The ability to capture real-time patient data, no matter the location, via remote patient monitoring, and to transmit that data to providers and organizations approved by the consumer/patient, will become a critical capability for all healthcare providers. Of all the remote patient monitoring product designs, wearable medical devices are emerging as the best positioned to support the evolving patient-focused healthcare environment. This book is for those who are evaluating, selecting, implementing, managing, or designing wearable devices to monitor the health of patients and consumers. This book will provide the knowledge to understand the issues that mitigate the risk of wearable technologies so people can deliver successful projects using these technologies. It will discuss their use in remote patient monitoring, the advantages and disadvantages of different types of physiological sensors, different wireless communication protocols, and different power sources. It will describe issues and solutions in cybersecurity and HIPAA compliance, as well as setting them up to be used in healthcare systems and by patients. business strategist Stephen Tweed comes a timely and vital book on the caregiver recruiting and retention crisis in the United States. Tweed offers an analysis of the crisis and proven solutions for meeting the challenge of staffing the ever-growing, in-demand home health industry. America urgently needs innovative housing and care solutions for our growing population of older persons. For those who do not require or cannot afford costly, full-time nursing care, yet find it increasingly difficult to live alone, board and care residential facilities may be the most practical and attractive alternative. What are board and care homes, and how do they operate? How are they managed and regulated? How can older persons, caregivers, and family members decide which are the best facilities? *Between Home and Nursing Home* suggests what to look for when choosing a facility, how to monitor the care offered, and the kinds of supervision and services that should be available. For residents and caregivers alike, the authors offer valuable suggestions and illustrate activities that contribute to total mental and physical well-being. *Between Home and Nursing Home* includes valuable appendixes that feature important facts about retirement facilities and tips on how to evaluate a residential care facility. Families and professionals will find this book to be a valuable guide to one of the fastest-growing housing and health care options available to the aged. This is a book on how home is made when care enters the lives of people as they grow old at home or in 'homely' institutions. Throughout the book, contributors show how home is a verb: it is something people do. Home is thus always in the making, temporal, contested, and open to negotiation and experimentation. By bringing together approaches from STS, anthropology, health humanities and health care studies, the book points to the importance of people's tinkering and experiments with making home, as it is here that home is being made and unmade. Technological advances have pushed the frontier of care management into the home setting and can help patients self-manage their conditions. A global study of the needs, priorities, and expectations of key stakeholders regarding home health care in six countries revealed that although such technologies represent a promising solution to current pressures on health care systems, they also face a number of barriers to adoption. *Digital Homecare* is a collection of services to deliver, maintain and improve care in the home environment using the latest ICT technology and devices. It is important to recognize the wide range of issues that are covered by digital homecare. This book shows a good selection of related issues, be it experience, technologies, managerial issues or standardization. A very diverse "audience"; elderly, people with chronic conditions, disabled, to name the most important groups, benefits from digital homecare, within the comfort and protection of their own homes. This volume will help to reduce health care costs and improve your quality of life by providing answers to your questions about symptoms and their solutions. What do doctors do when they get sick? The editors of *Prevention Magazine Health Books* asked more than 500 of the nation's top specialists to recommend their best doctor-tested and easy-to-follow remedies for 138 illnesses and maladies. Trusted. Valued. Essential. The Doctors Book of Home Remedies is sure to address your most frequent health questions with practical, useful answers. This book endures as a superb one-stop resource that will offer you and your family peace of mind for many years to come. An ageing population is burdening social and healthcare services around the world, and this problem is likely to get worse as the percentage of older people continues to rise. Many governments are already responding to this challenge, and a key element in their strategies is the development and deployment of computer-based telecare and telehealth technologies to support care at home in a cost-effective manner. Human involvement in care continues to be central, but home care technologies can offer reassurance, and support routine aspects, to the benefit of all concerned. This book provides an up-to-date overview of key advances in the relevant technology, with an in-depth examination of the latest research in various home care technologies by experts in the field. The book mainly discusses the results of the Mobilising Advanced Technologies for Care at Home (MATCH) project, co-ordinated by the University of Stirling in Scotland, but work on related projects is also included. The book will be of interest to all researchers and practitioners in the fields of telecare and telehealth, policymakers in these areas, and providers of social and healthcare with an interest in technology. Demographic, epidemiological, social and cultural trends in European countries are changing the traditional patterns of care. The next decades will see rising numbers of care-dependent older people and noncommunicable diseases as the leading cause of chronic illness and disability. Further, urbanization and the break-up of the traditional large family group will lead to gaps in the care of older or disabled family members. These changes in needs and social structure require a different approach to policy and services in the health and social sectors; a disease-oriented approach alone is no longer appropriate. Home care could be an answer to these issues: a sustainable approach to prevent the need for unnecessary acute or long-term institutionalization and to maintain people in their homes and communities as long as possible. Along with new forms of service delivery organization, technological innovation can represent a viable solution to developing home care in Europe, provided that health care systems can further enhance integration and coordination. This publication is part of the work of the WHO Regional Office for Europe to present evidence for health policy- and decision-makers in a clear and understandable form. It explains why health and social services should provide high-quality and targeted home care for disabled and older people. It provides evidence for the effectiveness of home care, shows how it can be improved, and explains the need to ensure equitable access. The publication also explores the varied cultural and care contexts in different countries, and reveals how to educate professionals and the public about these issues. This booklet seeks to broaden awareness, stimulate debate and promote action. Lasting healthcare for the entire population, specifically the elderly, has become a main priority in society. It is imperative to find ways to boost the longevity of healthcare services for all users. Sustainable Health and Long-Term Care Solutions for an Aging Population is a pivotal reference source featuring the latest scholarly research on issues pertinent to health cost and finding effective ways of financing healthcare for the elderly. Including coverage on a number of topics such as provider accreditation, corporate social responsibility, and data management, this book is ideally designed for policy makers, academicians, researchers, and advanced-level students seeking current research on the innovative planning and development of healthcare. Abstract: Given the ever increasing population of elderly in U.S, home healthcare agencies (HHA) serve as a model of

continuous quality and affordable care. HHA hold a promise to boost economy and reduce healthcare expenditures to a significant level. This business plan examines the business potential of a home healthcare startup in downtown LA. Chapter 1 deals with market analysis, providing detailed information on the company, its organization, services, market definition, customer analysis, target population, and service demand. Chapter 2 deals with feasibility analysis and strategic planning, including SWOT, to sell our services. In chapter 3, we have discussed the legal issues and regulations, and defined policies to abide by state and federal rules and regulations. Finally, chapter 4 is about financial analysis, providing detailed pricing structure, other expenditures and revenues and the overall potential of the business to strive profitability and survive market competition. In conclusion, the Health Elixir Home Healthcare business has shown potential for success in the market. "Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nurseshdbk/> "This book provides an in-depth introduction into medical, social, psychological, and technical aspects of smart healthcare applications as well as their consequences for the design, use and acceptance of future systems"--Provided by publisher. New policy responses are needed to address the many challenges posed by the ageing of populations throughout Europe, in terms of social security systems, health care, family formation, employment and education. A group of specialists has been established to examine all the aspects of the life of dependent elderly persons, including the needs of carers, care systems for sufferers from dementia, dependent elderly persons' integration in society, their participation in the life of the community and the prevention of dependence. This report argues in favour of providing integrated, multi-disciplinary, fair and accessible services which focus on individuals and respect their views in a spirit of solidarity between the generations at family, local community and national levels.
