This book examines the history of formative assessment in the US and explores its potential for changing the landscape of teaching and learning to meet the needs of twenty-first century learners. The author uses case studies to illuminate the complexity of teaching and the externally imposed and internally constructed contextual elements that affect assessment decision-making. In this book, Box argues effectively for a renewed vision for teacher professional development that centers around the needs of students in a knowledge economy. Finally, Box offers an overview of systemic changes that are needed in order for progressive teaching and relevant learning to take place. Practicing evidence-based medicine is widely regarded both as best clinical practice, and as the cornerstone of meeting the ACGME competencies in Practice-Based Learning and Improvement. Training programs recognize the need to teach the skills of EBM and yet struggle with readily available content and guidance on putting together a curriculum. Time frames for delivering curricula in residency can be very tight, often restricted to scattered one hour conferences. This book provides a modular curriculum structure for instructors, with each topic area taking up one section, or one hour of instructional time. Developed over the past 14 years as an introductory course for interns in the internal medicine residency program at Duke, the curriculum will cover core content areas in evidence-based medicine and best teaching practices for them and skills such as literature searching and applying evidence to patients. Most importantly, it will center on actual patient questions and use current literature as examples that instructors can use as teaching exercises. There will also be ample diagrams that have been shown to be effective with learners and each module will include a video tutorial of a sample teaching session, including visual aids and small group teaching techniques. The curriculum

can be implemented in any time frame necessary, compressed or longitudinal, to a variety of learners. This is an ideal guide for residency program directors and core faculty, either within internal medicine or more broadly in family medicine, pediatrics, surgery, OB-gyn, as well as medical school faculty for use with students. All mathematical concepts have been presented in a very simple and lucid form. Unit summary of key facts at the end, Mental Maths Exercises, Unit Review Exercises, Historical Notes, Quizzes, Puzzles, and Enrichment Material have been included. The special feature of this edition is the inclusion of Multiple Choice Questions, Challengers (HOTS), Worksheets and Chapter Tests. The ebook version does not contain CD. This compact text presents the fundamental principles of accounting and finance using Excel® as a tool for preparing and analyzing Balance Sheets and Profit & Loss Statements. The book also helps in learning the basics of Excel® and different functions it provides to format financial statements. The Third Edition of this book emphasises on accounting ratios that have been explained in detail by using the Balance Sheet of Ingersoll Rand India Ltd. for the year ending March 2014. The author uses the Balance Sheet of Ingersoll Rand India Ltd. to help students relate accounting principles to real-life situations. The topics analyzed include day-to-day problems that managers encounter such as forecasting balance sheets, investments in stock markets, management of receivables and inventory, EMIs, cost of discounting schemes, and designing finance schemes to promote a new product. The book is accompanied by a CD-ROM which includes 92nd Annual Report of Ingersoll Rand India Ltd. and the exhibits given in Chapters 4 to 6. This updated edition will be useful primarily to postgraduate students pursuing courses in management and commerce disciplines. It will also be of immense help to the professionals indulged in model-building and developing a decision support system on Excel® worksheets. The book is recommended by AICTE for PGDM course.
