Islamic History  
Through Coins May  
06 2021 What can  
one discover  
through the study  
of medieval Islamic  
coins? It appears  
that the regular  
gold dinars and  
silver dirhams  
issued by the  
Ikhshidid rulers of  
Egypt and Palestine  
(935-69) followed a  
series of  
understood but  
unwritten rules. As  
the first part of this  
book reveals, these  
norms involved  
whose names could  
appear on the  
regular currency,  
where the names  
could be placed  
(based upon a strict  
hierarchical order),

and even which  
parts of a Muslim  
name could be  
included. The  
founder of the  
dynasty,  
Muhammad ibn  
Tughj, could use  
the honorific al-  
Ikhshid; his eldest  
son and successor  
could use his  
teknonym Abu al-  
Qasim; his brother,  
the third ruler,  
could use only his  
name Ali; and the  
eunuch Kafur,  
effective ruler of  
Egypt for over  
twenty years, could  
never inscribe his  
name on the  
regular coinage. At  
the same time, each  
one of these rulers  
was named in the  
Friday sermon and  
most had their  
teknonym inscribed  
on textiles.  
Presentation coins,  
the equivalent of  
modern

commemorative  
pieces, could break  
all these rules, and  
a wide variety of  
titles appeared, as  
well as a series of  
coins with human  
representation. The  
second half of the  
book is a catalogue  
of over 1,200  
specimens,  
enabling curators,  
collectors, and  
dealers to identify  
coins in their own  
collections and  
their relative rarity.  
Throughout the  
book numismatic  
pieces are  
illustrated, along  
with commentary  
on their  
inscriptions, layout,  
and metallic  
content.

points to new directions in which rural development strategies need to be reconsidered. It offers strategic principles, programs of action, and a set of concrete policies that can be combined to devise effective strategies to help realize the potential of rural development and achieve the SDGs. Reexamining the narrow view of rural development, it expands the discussion to include the role of development in achieving the wider set of SDGs. In doing so, it pays particular attention to the interaction of rural development with SDG 6 (clean water and sanitation), SDG 8 (economic growth

and decent work), SDG 9 (infrastructure), SDG 11 (sustainable communities), SDG 13 (climate change), SDG 14 (life below water) and SDG 15 (life on land). The interlinkages of all these Goals suggest that there exist potential synergies between rural development and sustainable efforts in many other directions.

### **Chemical Thermodynamics of Americium**

May 18 2022 This is the second volume in a series of critical reviews of the chemical thermodynamic data of those elements of particular importance in the safety assessment modeling of high-level radioactive waste storage and disposal facilities. The objective of these reviews is to provide a set of reliable thermodynamic data that can be used to describe the behaviour of these elements under conditions relevant for radioactive waste

disposal systems and the geochemical environments. The present volume is a review of experimental data reported in the literature for americium. On a few occasions, where no data existed, comparisons and estimates were made based on experimental data on analog lanthanide elements. The basic philosophy was to develop a minimum set of solid phases and solution species of americium that would fit all experimental data being reviewed. Computational Models in Architecture Nov 12 2021 This scientific work focuses on

computer-aided computational models in architecture. The author initially investigates established computational models and then expands these with newer approaches to modeling. In his research the author integrates approaches to analytical philosophy, probability theory, formal logic, quantum physics, abstract algebra, computer-aided design, computer graphics, glossematics, machine learning, architecture, and others. Jan 26 2023 The Global Monitoring Report 2014/2015: Ending Poverty and Sharing Prosperity was written jointly

by the World Bank Group (WBG) and the International Monetary Fund, with substantive inputs from the Organisation for Economic Co-operation and Development. This year's report details, for the first time, progress toward the WBG's twin goals of ending extreme poverty by 2030 and promoting shared prosperity and assesses the state of policies and institutions that are important for achieving them. The report continues to monitor progress on the Millennium Development Goals (MDGs). Also for the first time, the report includes information about high-income

countries. It finds that while gaps in living standards have been closing in many countries, the well-being of households in the bottom 40 percent, as measured by the non-income MDGs such as access to education and health services, remains below that of households in the top 60 percent. The focus of this year's report is on three elements needed to make growth more inclusive and sustainable: investment in human capital that favors the poor, the best use of safety nets, and steps to ensure the environmental sustainability of economic growth. These three elements are imperative to all

countries' development strategies, and are also fundamental to global efforts to achieve the twin goals, the MDGs, and the Sustainable Development Goals that will succeed the MDGs. Global Monitoring Report 2014/2015 was prepared in collaboration with regional development banks and other multilateral partners. policy. But what are the features of UBI? What is it meant to achieve? How do we know, and what don't we know, about its performance? What does it take to implement it in practice? Drawing from global evidence, literature, and survey data, this volume provides a framework to elucidate issues and trade-offs in UBI with a view to help inform choices around its appropriateness and feasibility in different contexts. Specifically, the book examines how UBI differs from or complements other social assistance programs in terms of objectives, coverage, incidence,

adequacy, incentives, effects on poverty and inequality, financing, political economy, and implementation. It also reviews past and current country experiences, surveys the full range of existing policy proposals, provides original results from micro†“tax benefit simulations, and sets out a range of considerations around the analytics and practice of UBI.

His 1799–1804 research expedition to Central and South America with botanist Aimé Bonpland set the course for the great scientific surveys of the nineteenth century, and inspired such essayists and artists as Emerson, Goethe, Thoreau, Poe, and Church. The chronicles of the expedition were published in Paris after Humboldt’s return, and first among them was the 1807 “Essay on the Geography of Plants.” Among the most cited writings in natural history, after the works of Darwin and Wallace, this work appears here for the first time in a complete English-language translation.

Covering far more than its title implies, it represents the first articulation of an integrative “science of the earth, ” encompassing most of today’s environmental sciences. Ecologist Stephen T. Jackson introduces the treatise and explains its enduring significance two centuries after its publication.

### **Poverty and Shared Prosperity**

**2016** Oct 31 2020  
Poverty and Shared Prosperity 2016 is the first of an annual flagship report that will inform a global audience comprising development practitioners, policy makers, researchers, advocates, and citizens in general with the latest and most accurate estimates on trends in global poverty and shared prosperity. This edition will also document trends in inequality and identify recent country experiences that have been successful in reducing inequalities, provide key lessons from those experiences, and synthesize the

rigorous evidence on public policies that can shift inequality in a way that bolsters poverty reduction and shared prosperity in a sustainable manner. Specifically, the report will address the following questions: • What is the latest evidence on the levels and evolution of extreme poverty and shared prosperity? • Which countries and regions have been more successful in terms of progress toward the twin goals and which are lagging behind? • What does the global context of lower economic growth mean for achieving the twin goals? • How can inequality reduction

contribute to achieving the twin goals? • What does the evidence show concerning global and between- and within-country inequality trends? • Which interventions and countries have used the most innovative approaches to achieving the twin goals through reductions in inequality? The report will make four main contributions. First, it will present the most recent numbers on poverty, shared prosperity, and inequality. Second, it will stress the importance of inequality reduction in ending poverty and boosting shared prosperity by 2030 in a context of weaker

growth. Third, it will highlight the diversity of within-country inequality reduction experiences and will synthesize experiences of successful countries and policies, addressing the roots of inequality without compromising economic growth. In doing so, the report will shatter some myths and sharpen our knowledge of what works in reducing inequalities. Finally, it will also advocate for the need to expand and improve data collection—for example, data availability, comparability, and quality—and rigorous evidence on inequality impacts in order to

deliver high-quality poverty and shared prosperity monitoring.

**The Social Archaeology of the Levant** Feb 27 2023 The volume offers a comprehensive introduction to the archaeology of the southern Levant (modern day Israel, Palestine and Jordan) from the Paleolithic period to the Islamic era, presenting the past with chronological changes from hunter-gatherers to empires. Written by an international team of scholars in the fields of archaeology, epigraphy, and bioanthropology, the volume presents central debates around a range of archaeological

issues, including gender, ritual, the creation of alphabets and early writing, biblical periods, archaeometallurgy, looting, and maritime trade. Collectively, the essays also engage diverse theoretical approaches to demonstrate the multi-vocal nature of studying the past. Significantly, **The Social Archaeology of the Levant** updates and contextualizes major shifts in archaeological interpretation. **Targeting of Transfers in Developing Countries** Feb 15 2022 Drawing on a database of more than one hundred anti-poverty interventions in 47 countries,

'Targeting of Transfers in Developing Countries' provides a general review of experiences with methods used to target interventions in transition and developing countries. Written for policymakers and program managers in developing countries, in donor agencies, and in NGOs who have responsibility for designing interventions that reach the poor, it conveys what targeting options are available, what results can be expected as well as information that will assist in choosing among them and in their implementation. Key messages are: - While targeting

'works' - the median program transfers 25 percent more to the poor than would a universal allocation - targeting performance around the world is highly variable. - Means testing, geographic targeting, and self-selection based on a work requirement are the most robustly progressive methods. Proxy means testing, community-based selection of individuals and demographic targeting to children show good results on average, but with considerable variation. - Demographic targeting to the elderly, community bidding, and self-

selection based on consumption show limited potential for good targeting. - There is no single preferred method for all types of programs or all country contexts. Successful targeting depends critically on how a method is implemented. The CD-ROM includes the database of interventions, an annotated bibliography (PDF) and Spanish and Russian translations of the book (PDFs). [The Crimson Sword](#)

applied case as well as questions and answers. The updated second edition will be a valuable resource for the international development community, universities, and policy makers looking to build better evidence around what works in development.

Law and the "Sharing Economy"

Apr 17 2022

Controversy shrouds sharing economy platforms. It stems partially from the platforms' economic impact, which is felt most acutely in certain sectors: Uber drivers compete with taxi drivers; Airbnb hosts compete with hotels. Other consequences lie elsewhere: Uber is

associated with a trend toward low-paying, precarious work, whereas Airbnb is accused of exacerbating real estate speculation and raising the cost of long-term rental housing. While governments in some jurisdictions have attempted to rein in the platforms, technology has enabled such companies to bypass conventional regulatory categories, generating accusations of "unfair competition" as well as debates about the merits of existing regulatory regimes. Indeed, the platforms blur a number of familiar distinctions, including personal versus commercial

activity; infrastructure versus content; contractual autonomy versus hierarchical control. These ambiguities can stymie legal regimes that rely on these distinctions as organizing principles, including those relating to labour, competition, tax, insurance, information, the prohibition of discrimination, as well as specialized sectoral regulation. This book is organized around five themes: technologies of regulation; regulating technology; the sites of regulation (local to global); regulating markets; and regulating labour. Together,

the chapters offer a rich variety of insights on the regulation of the sharing economy, both in terms of the traditional areas of law they bring to bear, and the theoretical perspectives that inform their analysis. This book is published in English. - La controverse entoure les plateformes d'économie de partage, partiellement en raison de leur impact économique. Certains secteurs subissent des contrecoups de manière plus aigüe : les chauffeurs d'Uber font concurrence aux chauffeurs de taxi, ou les hôtes Airbnb rivalisent avec les hôtels. Par ailleurs, Uber exacerberait

l'emploi précaire et mal rémunéré tandis qu'Airbnb amplifierait la spéculation immobilière et entraînerait, à terme, une hausse du coût de location. On a tenté de réglementer ce type de plateformes, mais la technologie est telle qu'elle permet aux entreprises d'aisément contourner la réglementation conventionnelle, si bien que les accusations de « concurrence déloyale » fusent de toutes parts, provoquant une remise en question du cadre réglementaire. En effet, de telles plateformes viennent brouiller les cartes, confondant les

distinctions convenues entre personnel et commercial, infrastructure et contenu, autonomie contractuelle et contrôle hiérarchique. Cette ambiguïté peut avoir d'importantes répercussions sur le bon fonctionnement de l'appareil réglementaire qui encadre les principes organisateurs du travail, de la concurrence, de l'impôt, de l'assurance, de l'information et de de l'interdiction de la discrimination, sans parler de la réglementation sectorielle spécialisée. Cinq thématiques sont abordées dans cet ouvrage : les technologies de la réglementation; la

réglementation de la technologie; les lieux de la réglementation (du local au mondial); la réglementation des marchés; et la réglementation du travail. Les chapitres se conjuguent pour offrir une réflexion d'une gamme d'experts sur la jurisprudence traditionnelle que sur les approches théoriques qui informent et façonnent la réglementation de l'économie du partage. Ce livre est publié en anglais.

*Peace Education from the Grassroots*  
Sep 29 2020

Historians often ignore the day-to-day struggles of ordinary people to improve their lives. They tend to focus on the accomplishments of illustrious leaders. *Peace Education from the Grassroots* tells the stories of concerned citizens, teachers, and grassroots peace activists who have struggled to counteract high levels of violence by teaching about the sources for violence and strategies for peace. The stories told here come from the grass roots meaning the educators are close to the forms of violence they are addressing. This collection of essays

tells how citizens at the grassroots level developed peace education initiatives in thirteen different nations (Belgium, Canada, El Salvador, Germany, India, Jamaica, Japan, Mexico, the Philippines, South Korea, Spain, Uganda, and the United States). A fourteenth article describes the efforts of the International Red Cross to implement a human rights curriculum to teachers on the ground in the Balkans, Iran, Senegal, and the United States. These chapters describe a variety of schools, colleges, peace movement organizations, community-based organizations, and international

nongovernmental organizations engaged in peace education.

The Structure and Function of Aquatic Microbial Communities Feb 21 2020 This book discusses how aquatic microbial communities develop interactive metabolic coordination both within and between species to optimize their energetics. It explains that microbial community structuration often includes functional stratification among a multitude of organisms that variously exist either suspended in the water, lodged in sediments, or bound to one another as biofilms on solid surfaces. The authors

describe techniques that can be used for preparing and distributing microbiologically safe drinking water, which presents the challenge of successfully removing the pathogenic members of the aquatic microbial community and then safely delivering that water to consumers. Drinking water distribution systems have their own microbial ecology, which we must both understand and control in order to maintain the safety of the water supply. Since studying aquatic microorganisms often entails identifying them, the book also discusses

techniques for successfully isolating and cultivating bacteria. As such, it appeals to microbiologists, microbial ecologists and water quality scientists.

Monitoring, Modelling and Management Of Water Quality

Oct 19 2019

Different types of pressures, such as nutrients,

micropollutants, microbes, nanoparticles, microplastics, or antibiotic-resistant genes, endanger the quality of water bodies. Evidence-based pollution control needs to be built on the three basic elements of water governance: Monitoring, modeling, and management. Monitoring sets the empirical basis by providing space- and time-dependent information on substance concentrations and loads, as well as driving boundary conditions for assessing water quality trends, water quality statuses, and providing necessary information for the calibration and validation of

models. Modeling needs proper system understanding and helps to derive information for times and locations where no monitoring is done or possible. Possible applications are risk assessments for exceedance of quality standards,

assessment of regionalized relevance of sources and pathways of pollution, effectiveness of measures, bundles of measures or policies, and assessment of future developments as scenarios or forecasts. Management relies

on this information and translates it in a socioeconomic context into specific plans for implementation. Evaluation of success of management plans again includes well-defined monitoring strategies. This book provides an important overview in this context.
